Letters of Gratitude from Our Patients
At a Moment’s Notice

MOMENTS THAT MATTER
A TEAM APPROACH TO CARDIAC CARE
READ BILL’S STORY
Greetings,

I am very proud to let you know that Newton Medical Center is ranked in the top five for “Top Hospitals Overall” in the category of New Jersey hospitals with under 350 beds, according to Castle Connolly Medical Ltd., and reported in Inside Jersey magazine. This reflects on the quality of our physicians, facility and all our staff who strive to provide the best care for you every day.

Newton Medical Center also ranked as a top performer in eight categories: hip and knee repairs, neurological disorders, pain management, breast cancer, prostate cancer, congestive heart failure, stroke and high-risk pregnancies.

As part of our ongoing commitment to excellence, our hospital has achieved the Pathway to Excellence designation from the American Nurses Credentialing Center, signifying that we have created a work environment where our nurses can feel empowered. In addition, Newton Medical Center is participating in a collaboration of 12 New Jersey hospitals focused on reducing serious preventable events in health care. We’re also planning a major renovation project to redesign and upgrade a 25-bed patient wing.

In this issue, you’ll discover how our Emergency Department team saved and stabilized a man having one of the most dangerous types of heart attacks. You’ll read some of the many letters we receive from grateful patients and their families regarding the excellent care they received from our skilled and compassionate staff. And, you’ll learn more about the state-of-the-art upgrades and renovations being made to one of our inpatient units.

You’ll also find a calendar of local classes, activities and support groups to keep you active throughout the spring and summer.

I hope you enjoy the change of season, and know we are here for your health care needs.

JOSEPH DIPAULO
President,
Newton Medical Center
Creating Healthier Communities - We’re More Than Hospitals

When you hear about Atlantic Health System, you may naturally think hospitals. But “system” is what we are all about.

We are an integrated care delivery system that serves 4.9 million people across New Jersey. Integrated in that we work as a system – across more than 400 sites of care – to coordinate the health services patients need throughout their lives. We are not only healing illnesses in our hospitals, but encouraging and supporting a lifetime of health and wellness for our patients across our system of care.

Our patients connect with us through the offices of our affiliated physicians, urgent care clinics, hospitals, home care and hospice providers, rehabilitation facilities, medical laboratories, therapy and imaging centers - even from their home computers and smartphones. Should our patients need hospitalization, we are there to provide them with the best possible experience. But for everyday needs, our system of care is there, right in the heart of the communities we serve.

That’s what we mean when we say that Atlantic Health System is working hard to deliver the highest quality care at the right time, at the right place, and at the right cost.

Newton Medical Center Achieves Pathway to Excellence

Atlantic Health System’s Newton Medical Center has achieved Pathway to Excellence designation from the American Nurses Credentialing Center (ANCC). The Pathway to Excellence designation identifies the elements of interprofessional work environments where nurses can flourish and feel empowered.

The Pathway to Excellence designation is granted based on the six Pathway to Excellence Practice Standards:
- Shared decision making
- Leadership
- Safety
- Quality
- Well-being
- Professional development

For an organization to earn the distinction, it must successfully undergo a thorough review process that documents foundational quality initiatives in creating a positive work environment. Nurses in the organization validate the presence of the criteria through participation in a completely voluntary and confidential online survey.

As a Pathway to Excellence-designated organization, Newton Medical Center is committed to creating an environment where nurses excel and feel valued as integral members of interprofessional health care teams.

Newton Embarks on High Reliability Journey

Newton Medical Center is embarking on a High Reliability Journey as part of its commitment to patient safety, participating in a New Jersey Hospital Association collaborative of 12 New Jersey hospitals focused on reducing serious preventable events in health care.

As part of the “Jersey STRONG” initiative, Newton Medical Center will be working to change their culture through Safe and Reliable Error Prevention Training using best practice strategies. This training focuses on Speaking Up for Safety, including Escalating Concerns, Thinking Critically, Reliable Communication, and Cross-Checking and Coaching Others. Leadership training began in 2017, and all employees and physicians will be trained through all of 2018.
Advances in the treatment of cancer continue to improve with the help of clinical research trials like those conducted at Atlantic Health System. "Most clinical trials are related to chemotherapy," says Steve Halpern, MD, director, Pediatric Oncology Center. "Because of that, we’ve changed the way the chemotherapy is given to help better kill the cancer cells. But now, we’re seeing more targeted therapy used in conjunction with chemotherapy.”

In targeted therapy, the unique properties of the cancer cell are attacked directly. "We had a child recently who had the most common type of leukemia. We treated her with one round of chemotherapy, and it didn’t work. She got sick and lost her hair and was in the hospital quite a bit," says Dr. Halpern. "We then gave her targeted therapy once a week as an outpatient. She felt much better within a short time and after just three weekly treatments of this targeted therapy, the leukemia was completely eradicated.” For more information, please call 973-971-6720.

In addition to the pediatric cancer research, we are conducting clinical studies in adults at Atlantic Health System’s Overlook Medical Center. Overlook Medical Center is the only hospital in New Jersey involved in the MIND Study of Artemis’ minimally invasive neuro evacuation device to remove intracerebral hemorrhage. The device is inserted through a small incision into the affected area of the brain and removes the clot by suctioning it out through a catheterlike device. The study is open to patients 18 to 80 years old with an intracerebral hemorrhage.

“Our interventionalist team has performed about 60 of these procedures using the Artemis device over a two-year period and has seen an increase in survival rate with the device pre-trial,” according to principal investigator Paul Saphier, MD, an endovascular neurosurgeon for the Atlantic Neuroscience Institute. “We are proud to be a major participant in this trial, as well as many others, that provide a benefit to our patients.” For more information, call 833-733-4641. Visit atlantichealth.org/research for more information.
When Bill Striffler had a heart attack in the middle of the night, a large medical team from Atlantic Health System joined together across many miles to save him.

“He had one of the most dangerous types of heart attacks, and it required specially trained EMTs and special equipment to keep him alive until he got to the hospital,” says David James, MD, a cardiologist on the medical staff at both Morristown and Newton medical centers. “Time was critical.”

“I don’t remember all the details,” says Bill, 65, a jovial and active semi-retiree who lives in Wantage. “But I know there were many, many people around me, and they knew what they were doing.”

The first of many to literally save his life was the EMT team, during the ambulance ride to the Emergency Department at Newton Medical Center. They delivered heart muscle-saving shocks to Bill using an automated external defibrillator (AED) to bring his heart back into rhythm – twice. (See sidebar.)

At Newton, staff gave Bill another lifesaving treatment: the clot-busting drug tPA, which partially opened his blocked arteries. Then they readied him for transfer to Atlantic Health System’s Morristown Medical Center.

There, a team specializing in this type of heart attack, called a STEMI (ST-elevation myocardial infarction), was prepared and awaiting his arrival.

“Our STEMI team is here for patients like Bill 24/7,” Dr. James says. Though his heart muscle was no longer dying, he needed further emergency care. “He still had a dangerous 95 percent blockage in one artery that we had to clear,” he says. They successfully corrected the blood flow by using a catheter and stents.

Despite the dramatic urgency of that December night two years ago, Bill soon resumed his active lifestyle of hiking, biking and kayaking. Bill also regularly uses his graphic design and master gardener talents at Heaven Hill Farm in Vernon, N.J. and various community theater and nonprofit groups.

Bill has made a couple of lifestyle changes, he says. “Thirty years of cigarette smoking ended that very night. And I might not shovel snow like I used to, but who wants to do that anyway?”

---

**Million-Dollar Project Makes Seconds Matter**

“For some types of heart attack, electric shock is the only solution,” says David James, MD, a cardiologist on the medical staff at both Morristown and Newton medical centers.

Since the program’s inception 17 years ago, Newton Medical Center Foundation has helped provide 750 AEDs to organizations throughout Sussex and Warren counties. It has also trained over 4,000 individuals on how to use the devices.

Most recently, at Newton’s Heart and Soul Celebration, the foundation raised $65,000 to support the AED project. Stephen Flynn, donor relations manager for the foundation, said that so far, the devices have saved the lives of 52 local residents, with Bill Striffler among them.
Dear Mr. DiPaolo,

In the past, I had contacted you regarding a visit to the emergency room that was not a good experience, and I thought you would like to hear about the excellent care given to my husband.

My husband, Thomas J. Ferrone, has early onset Alzheimer’s and Lewy body dementia, and resides at Andover Subacute. On Wednesday, he hit his chin and required stitches. The staff in the ER: Mary (PA), Alexis (RN), Nurisha and Angela (ERT) were excellent. They understood my husband’s condition and were extremely compassionate, gentle and caring with him. Since he required stitches, they needed the security staff: Sean Gannon, Dave GANung, Mike Pepe and Ken Villano. They also were compassionate, understanding and caring.

Mr. DiPaolo, I wanted to be sure that you knew how great your emergency room and security staff are. I left with peace of mind, which is a rare thing during this difficult time.

– Claudia F.

Dear Mr. DiPaolo,

I am writing this letter to you to let you know what a wonderful job one of the nurse assistants, Nisha Triveldi, did while I was a patient. Because I was so weak and in so much pain prior to being admitted, I wasn’t able to shower or shave in over a week.

No one other than Nisha paid so much attention to me and took care of me with such compassion, consideration and professionalism. She washed me up, shaved me, washed my hair and gave me clean hospital attire. This made me feel so much better since I had no control in my condition.

My late wife was a nurse and so is my daughter, and I know how important it is to treat patients as I was treated by Nisha. She helped restore my self-respect and pride. This is important for healing. I hope Nisha goes on to become a nurse because she will definitely make a difference.

– Bruce K.
In a medical emergency, such as a stroke or a heart attack, getting needed care fast is paramount. A new application called Twiage, used by Emergency Medical Services (EMS), allows transport units to provide detailed information to hospitals about a patient’s condition before arriving at the emergency department.

According to Newton Medical Center Emergency Department (ED) Nurse Manager Douglas Cook, RN, “Twiage is an app EMS personnel use on their phone that notifies us in a HIPAA-compliant way of patients who are coming to the ED. It allows them to give us a much more in-depth picture of the patient.”

In addition to sending information about the patient’s condition, Twiage can send photos, EKGs, or videos in real time so EDs are prepared for the patient’s arrival. Hospital specialists can also be notified ahead of time. For instance, if the incoming patient has had a stroke, Twiage alerts the hospital’s stroke coordinator.

Prior to the use of Twiage, hospitals used the public frequency HEAR (Hospital Emergency Ambulance Radio) system. “Twiage replaces the HEAR radio and gives EMS a more broad and interactive way to communicate with the ED,” says Cook. “We can ask questions through it, and they can give us more information.”

The Twiage system recently helped hospital personnel prepare for the arrival of a 62-year-old stroke victim. “She was at work and went to her supervisor’s office because she didn’t feel well and became unresponsive. An ambulance was called, and the EMS team sent us notification so we could prepare for the patient, making sure the CT scanner was ready. We set up TESS, our Telestroke Electronic Stroke System at the bedside to connect with our neurology specialists at Overlook once she arrived.”

EMS units use phone app to accelerate hospital emergency department readiness
Health care is going to the dogs. And before you think that’s a bad thing, you need to experience Soothing Paws in person.

With 85 dog and handler teams in our program, Soothing Paws is making a difference in the lives of patients and hospital staff by providing stress relief when it’s needed most. In addition to scheduled rounds at each hospital in Atlantic Health System, visits are available by request for most patients, their families and visitors.

“We’re constantly stopped in the halls so patients, families and hospital employees can kneel down, pet and talk to our dogs,” says Mildred Kowalski, PhD, RN, the Morristown nurse researcher who manages the Soothing Paws Program. “Because our dogs are so gentle and loving, they provide immediate and enduring comfort. It’s an absolutely amazing form of therapy.”

The pups are so popular they even have their own trading cards, which are handed out (along with hand sanitizer) following each and every therapy encounter. How popular is Soothing Paws? In 2017, our dog-handler teams averaged 200 visits per month to patients in need of smiles across all medical centers in the system.

“The program is a huge success and continues to grow in popularity since it began in 2007,” says Kowalski. “We’re always looking for new dogs, so consider joining the program if you have a loving pet. It’s a very rewarding way to volunteer.”

All dogs in the program must be registered after a training process and most, but not all, are handled by their volunteer owners.

For more information, contact Peggy Grow, coordinator, at 973-971-5941 or visit atlantichealth.org/pettherapy.
NO MORE WHISPERS
It’s time to talk about mental health issues

For those of us who have never experienced mental health issues, it’s often difficult trying to relate to friends, family or loved ones who suffer with behavioral or emotional challenges.

Acknowledging the existence of mental health issues within our families and communities is a very important first step to receiving the necessary support, which is why Atlantic Health System created its “No More Whispers” program.

“The stigma surrounding mental health has gone on for far too long,” says Director of Atlantic Behavioral Health Lori Ann Rizzuto, LCSW. “Many people don’t want to admit they are struggling – often they are embarrassed or ashamed. This feeling of isolation has to end, which is why this program was developed and why it’s so important for our community.”

No More Whispers is motivated to get people talking openly about a condition that affects one in six U.S. adult lives, according to the National Institute of Mental Health. Through printed materials, presentations and community outreach efforts, No More Whispers will enhance awareness and engage influencers throughout New Jersey about the importance of access to mental health care.

“So many communities are doing amazing work already,” says Rizzuto. “We want to integrate our efforts with theirs. Our message is clear: We all need to address this challenge together by encouraging those in need to ask for help.”

Each hospital in Atlantic Health System is providing initiatives through the No More Whispers program. To learn more about efforts in your community – or to include No More Whispers in your outreach efforts – email loriann.rizzuto@atlantichealth.org for more information.

“Many people don’t want to admit they are struggling … This feeling of isolation has to end.”

– Lori Ann Rizzuto, LCSW
It’s All About You

Expect an improved Atlantic Health System website experience

The new Atlantic Health System website was designed with YOU in mind. Connect quickly and easily with the services you need, or take a deep dive to find information that can help you improve your health.

YOU ASK, AND WE ANSWER
How can we help you? It’s the first question you’ll see on our website. We know you are busy, and we want to help you get the answers you need as easily as possible. That’s why we’ve enhanced the search experience in multiple ways. It offers predictive search to help you spell those often difficult medical terms. And it goes beyond traditional searches to match you with those physicians most experienced and qualified to deal with your specific health needs.

YOU’RE ON THE MOVE … WE WON’T SLOW YOU DOWN
Our new mobile experience is as fast as you are. Simple to navigate with action buttons, touch screen features, videos and more.

HELP YOURSELF
Another brand-new web feature is a series of do-it-yourself health quizzes, or “health assessments.” Topics include allergies, depression, heart health, pain and more. And for more DIY capabilities, including online appointments, communications with your doctor’s office, access to your medical records and test results, ask about MyChart.

Like you, the website will continue to evolve and grow. We look forward to seeing you at our new home. Come visit us at atlantichealth.org.
Newton Medical Center is embarking on a major renovation project that will transform the current inpatient unit 1 Hussey into a more modern, state-of-the-art patient wing. The 1 Hussey unit is a 25-bed unit, which includes seven private rooms and nine semiprivate rooms. The renovation project is designed to enhance the patient, family and clinician experience. Plans include new upgrades and finishes to all existing rooms, which will provide a greater soothing and healing environment. Patient rooms will include remodeled bathrooms and will feature bedroomlike cabinetry and furniture, but they will also include the latest medical technology and equipment. The exceptional care and comfort that patients have come to expect at Newton Medical Center will now be matched by a new warm, beautiful and welcoming setting.

The key design element will be a new open nurses’ station immediately visible to families upon entering the unit. Touchdown work stations will be expanded to enhance operations and workflow. An off-stage room will be added behind the nurses’ station to enhance clinician interaction and HIPAA compliance. Additionally, a family lounge adjacent to the nurses’ station will be added, giving family members and friends a quiet and comfortable space to use.

Learn more about this exciting initiative and how your gift can allow Newton Medical Center to stay on the forefront of medical technological advances, enhance our programs, services and facilities, and most importantly, support our mission to deliver high-quality, safe, affordable patient care within a healing culture.
