Ask the Expert: Breast Surgery Breakthroughs

The Skinny on Wearable Fitness Trackers

Healthy Gut, Happy Life
Summer is when we can hopefully take it easy, spend some time with our friends and family, and enjoy New Jersey’s best season.

At Overlook and throughout our integrated health care system in the eastern region, the concept of making health care easier for patients is a key driver in all that we do – in all four seasons.

Access to the best care is a primary focus toward this goal, as you will see through this issue of AtlanticView.

Offering patients like Silvia Montoya the latest immunotherapy treatment for breast cancer minutes from her home, pioneering novel surgical treatment for vascular disease, and operating a state-of-the-art cardiac care unit, ready 24 hours of every day, are examples of raising the levels of access to advanced care in our community.

By doubling our services at Overlook’s Union Campus located in the area referred to as Five Points, we are bringing Overlook-caliber care conveniently close to home for our central eastern Union County communities, addressing needs for cancer care, neurology, primary care and more in that area.

In our commitment to increase access to your health information, we encourage everyone to download the Atlantic Anywhere app to obtain your health care records right on your phone – whether you’re “down the shore,” at the lake or in your own backyard.

Wishing you a healthy summer,

ALAN LIEBER
President,
Overlook Medical Center

I've always believed the blue "H" signs you see throughout your town stand for more than just a place to go in an emergency. Behind each sign is a dedicated workforce of thousands of talented, highly trained, compassionate individuals – amazing caregivers who devote their lives to improving the health of their neighbors and communities.

At Atlantic Health System, you’ll find these remarkable people at each of our six hospitals and 400 care sites across New Jersey. Whether you’re looking for a flu shot or require cutting-edge surgery, our team of 17,000 – physicians, nurses, therapists, food service professionals, environmental stewards and so many more – are ready to care for your family 24/7.

We are excited about our new partners in your community. By joining with MedExpress, we now provide urgent and walk-in care across the state, no appointment necessary. You can also visit one of our 4,000 affiliated physicians for care beyond the walls of our medical centers.

A good neighbor is always ready to help in a time of need. In this edition, we share stories of how we are supporting people like you, in neighborhoods like yours. I hope you enjoy the issue, and as always, thank you for entrusting Atlantic Health System with your care.

Atlantic Health System
OVERLOOK MEDICAL CENTER NAMED AMONG TOP 25 HOSPITALS IN THE U.S. FOR ENVIRONMENTAL STEWARDSHIP IN HEALTH CARE FROM PRACTICE GREENHEALTH

The award is one of the Environmental Excellence Awards given each year to honor environmental achievements in the health care sector.

The 25 hospitals presented with Practice Greenhealth’s highest honors exemplify environmental excellence and are setting the highest standards for environmental practices in health care. Award winners are leading the industry with innovation in sustainability – and have the data and documentation to prove their success. Each year, the competition for these top spots increases as hospitals across the country continue to innovate.

Overlook Medical Center in 2018 led New Jersey in making health care environmentally sustainable while reducing health care costs:

The direct-to-drain fluid management system in Overlook’s operating suites reduced the number of waste containers, saving $400,000 in annual disposal costs.

Overlook reduced energy use intensity by 8.6%; saved 150 metric tons of CO2; reduced water use by 655,822 gallons; recycled 669 tons of waste; eliminated items that have a DEHP/PVC alternative; and replaced plastic straws with paper in its cafeterias.

Overlook converts water, electricity and salt into “green” cleaning/disinfecting solutions.

Overlook’s tri-generation power plant reduced energy needs by more than 60%.

Overlook has 10 on-campus beehives producing locally sourced honey; supports a community garden in Summit, and in 2018 helped create another garden in Union Township; owns 32 chickens at a local coop, and facilitates access to locally sourced food – all used in Overlook’s “Bee Healthy” educational program for local schools and community organizations.

BEATING THE ODDS

11% of all new cases of breast cancer in the United States are found in women younger than 45 years old. Silvia Montoya is part of that group. She is also an inspiration to others, as she is surviving – and thriving – with breast cancer.

Four years ago, with three young children and a husband and a demanding job, Silvia Montoya was like so many other women: busy all the time, and putting everyone before herself. At just 33 years old, breast cancer was the last thing on her mind; the disease was strictly for older women, she thought. A lump that had been present for years in her left breast started to grow and change, and her husband forced her to go to the doctor.

“I went just to appease him,” Silvia says. It’s a good thing she did.

ACCESS TO THE BEST INTERDISCIPLINARY CARE TEAM

In October 2015, Silvia was diagnosed with stage 3 breast cancer. According to statistics from the CDC, 11% of all new cases of breast cancer in the United States are found in women younger than 45 years of age.

At Overlook’s Carol G. Simon Cancer Center, Silvia had the benefit of working with a multidisciplinary care team that also included a nurse navigator who was dedicated to helping Silvia through her journey. She underwent a mastectomy with breast surgeon Margaret Sacco, MD. Surgery was followed by radiation with Joana Emmolo, MD, and chemotherapy at the Overlook Infusion Center with Bonni Guerin, MD, breast medical oncologist. In 2017, Silvia had reconstructive surgery with James Gardner, MD. “I can’t imagine a better group of doctors,” Silvia says of her team. “There is no doubt in my mind that they saved my life.”

IMMUNOTHERAPY HELPS BEAT THE ODDS

Silvia has remained under Dr. Guerin’s care, carefully followed as she continued with hormonal therapy to stave off a recurrence. Several months ago, Dr. Guerin, who directs Breast Cancer Treatment and Prevention for Atlantic Medical Group, was able to add another layer of protection to Silvia’s treatment plan. “Silvia had 35 lymph nodes involved with cancer, and the risk of harboring microscopic amounts of metastatic disease to other areas increases with the number of lymph nodes involved,” explains Dr. Guerin. Silvia is beating the odds with the latest available treatments. “Silvia is now being treated with forward-thinking, research-based immunotherapy,” says Dr. Guerin. This one addition – a “doublet” of traditional hormonal therapy and immunotherapy – has advanced the average time of progression-free survival from several months to more than two years in patients with known metastatic disease. Currently, research is looking at using these medicines to prevent recurrences in those at highest risk.

Connecting All Women to Breast Cancer Screening and Support

*Overlook partners with Susan G. Komen North Jersey® and other community leaders to improve access and outcomes for breast health. A grant from Susan G. Komen North Jersey helps patients who lack insurance get the necessary annual breast screening to help detect breast cancer early and refers those who need it for treatment. It’s all about saving lives in our communities.

*Curémonos partners with hospitals, physicians and community organizations to help Latinas (see next page).
“Silvia is now being treated with forward-thinking, research-based immunotherapy.”

– Bonni Guerin, MD

“Cancer can feel like an out-of-body experience,” Silvia says. “You don’t know where to turn. And I know if I didn’t know what to do, there are a lot of other people who don’t know either. I had the greatest support system of family and friends. People today spend a lot of time thinking that things are bad and people are horrible, but I now have the total opposite impression. You can’t control the cancer, but you can control how you deal with it.”

ATLANTIC MEDICAL GROUP

Drs. Emmolo, Gardner, Guerin and Sacco are all part of Atlantic Medical Group, a multispecialty network of health care providers. For more information, visit atlanticmedicalgroup.org or atlantichealth.org/findmyamgdoc.

The Breast Center at Overlook can be reached at 908-522-5762.

GIVING BACK ... AND LOOKING FORWARD

As Silvia continues with treatment and moves forward in remission, she has taken on a new role – that of volunteer. Silvia was so inspired by the support she received from her breast nurse navigator at Overlook, she wanted to do something similar for other breast cancer patients. It was the navigator, Sandra Wrigley, RN, CN-BN, who told Silvia about Curémonos, a community-based nonprofit organization that provides education, support and advocacy to medically underserved women, primarily Latinas, who are dealing with breast health concerns or a breast cancer diagnosis.

Dora Arias, a fellow breast cancer survivor who is being treated at Overlook, created the grassroots organization, formally establishing it in 2009 after serving for two years as a patient educator.

Curémonos functions as a patient-navigator program to help Latinas with breast health education, advocacy and connecting them to free breast cancer screenings. Curémonos partners with hospitals, physicians and community organizations to help patients and their families navigate the health care system to obtain care in a timely, efficient and culturally accessible manner as well as to encourage early breast cancer screening, diagnosis and treatment.

Today, Silvia works with Curémonos by talking to women about nutrition, wellness and stress reduction. She also creates bags for patients undergoing chemotherapy at Overlook and other hospitals, filling each with such special touches as lotions and lip balms, candies, antibacterial wipes and even a handwritten note with words of encouragement. “Little things like this can improve someone’s day,” says Silvia. “Everyone involved in my care has been amazing. Anything I’ve needed – emotional support, financial guidance, a prosthesis – someone was there. I’m just trying to give back. To me, that’s the most important thing right now. I’m lucky to be able to do this.”

ASK THE EXPERT

WHAT SHOULD A WOMAN DIAGNOSED WITH BREAST CANCER LOOK FOR WHEN CHOOSING AN ONCOLOGY TEAM?

Hearing a diagnosis of breast cancer can be overwhelming, so it is important for women to find a comprehensive, patient-centered breast center that is solely devoted to breast malignancies. Our breast program is nationally accredited and promotes an integrated, multidisciplinary approach to every aspect of a woman’s cancer care. Patients are in expert hands here, and we work to educate and empower women through every step of their breast cancer journey.

AS AN EXPERIENCED COSMETIC BREAST SURGEON, WHAT CAN PATIENTS EXPECT AESTHETICALLY FROM YOUR PROCEDURES?

The cosmetic outcome of surgery can have a tremendous impact on the psychological and emotional recovery of breast cancer patients. We strive to treat the cancer and leave the patient looking as natural and complete as possible. With improvements in technologies and surgical techniques, we can effectively remove the cancer and provide optimal cosmetic results so there is little-to-no visible reminder of the surgery. We work closely with oncologists and plastic surgeons to coordinate care so patients achieve the best possible outcome.

HOW DO YOU ‘HIDE’ A SCAR?

Scars can be hidden in “secretive” places, like the inframammary fold where the breast naturally meets the chest wall, the crease of the armpit or the circumference of the areola. With “hidden scar surgery,” we use special retractors – long, lighted instruments – that provide appropriate visualization. Thankfully, due to increased public awareness of the importance of screening mammograms, most women are catching their breast cancer at an early stage, allowing them the increased possibility for being a candidate for these kinds of procedures. And many of my patients happily note that they can barely find their scar.

HOW DID YOU DECIDE TO PURSUE THIS FIELD OF MEDICINE?

I originally thought I was going to become a professional ballet dancer. I was even chosen to perform with the New York City Ballet Company when Mikhail Baryshnikov was with them. After high school, I chose to spend a year dancing, and I realized that I missed the intellectual challenges of the academic world. I went back to Princeton the following year, which launched my passion into medicine.

WHAT ROLE DO YOU PLAY IN A PATIENT’S LIFE OF SURVIVORSHIP AFTER YOU’VE ACTIVELY TAKEN CARE OF THE CANCER?

It’s a lifetime commitment to help women maintain breast health and remain cancer-free, and I am privileged to provide this support and guidance. Once a woman has completed active treatment, we provide her with a survivorship care plan that details her diagnosis, treatments and follow-up care. Thankfully, we are able to treat most of our patients with the intent to cure. However, the risk of recurrence is greatest within the first two years after treatment, so we follow our patients closely and help them understand what they can do to reduce their risk of breast cancer. Over the long term, these women become my friends, and this is one of the things I like most about being a breast surgeon.

“It’s a lifetime commitment to help women maintain breast health and remain cancer-free, and I am privileged to provide this support and guidance.”

– Rebecca C. Yang, MD

It’s a story Ricardo Caraballo, MD, has heard countless times: that of the patient who does not travel to see friends, or the one who does not get down on the floor to play with her grandchildren anymore. It’s not for lack of want, he says. “It’s because they are afraid they will leak.”

Urinary incontinence is a common problem, but too many women suffer in silence. Fortunately, urogynecology has emerged as a subspecialty of obstetrics and gynecology to help women with urinary incontinence and other disorders of the pelvic floor. The board-certified physicians of Atlantic Urogynecology Associates offer comprehensive management of these conditions, including surgical and nonsurgical options.

Did not know I had to go
It’s important to distinguish between stress incontinence – in which urinary leakage is associated with such activities as coughing or laughing – and urge incontinence, in which urine starts coming out before you get to the bathroom.

For stress incontinence, nonsurgical options include pelvic floor exercises, physical therapy, or the insertion of a pessary that supports the urethra and prevents leaking. When surgery is required, many women are candidates for a procedure known as a suburethral sling. This sling is placed under the urethra to support it and close it during sudden activities (like the aforementioned coughing). “This has a high success rate with a very low rate of complication,” says Dr. Caraballo. “It’s a half-hour procedure, you return home the same day, and you see results quickly.”

Women often can address urge incontinence with such treatments as vaginal estrogen, medications that decrease the urge to urinate, or dietary changes. If these interventions do not work, patients may benefit from botulinum injections to the bladder, or from percutaneous tibial nerve stimulation (PTNS). Dr. Caraballo compares the latter to “a pacemaker for the bladder,” explaining that a neuromodulator implanted in the buttocks sends impulses that downregulate nerves in the bladder.

In every case, says Dr. Caraballo, “we partner with patients to get a good history, provide a diagnosis and give women options. There is a lot we can do to help once we know there is a problem.”

Hey ladies! time to go ... get help for urinary incontinence

“No one has to live with this. There is a lot we can do to help once we know there is a problem.”

– Ricardo Caraballo, MD
First Came Love …
And Then Four Babies in a Baby Carriage

Jasmin Singleton and Latoya Jones – both in their early 30s – had been dating for several years when they decided that they wanted to raise a family of their own in their Essex County, NJ, home.

“Up until then, we were both focused on our jobs,” says Jasmin. “We were aunts, godmothers, and a babysitting support system for our friends and family members; but, eventually, each of us wanted the experience of giving birth to our own babies.”

After they both worked with fertility experts to get pregnant, they got the surprise of a lifetime.

“That’s when things started to get interesting,” recalls Latoya. “Eight weeks into my pregnancy, I learned that I was carrying twins.” Six months into Latoya’s pregnancy, Jasmin also learned that she was carrying twins.

“At first, I was completely overwhelmed,” admits Jasmin. “I was scared and nervous about how we would manage taking care of four babies at once. I just sat in my car and cried.”

It was not long before fear turned to joy. Under the care of Winsome Parchment, MD, whose practice is in Maplewood, Latoya and Jasmin had healthy pregnancies leading up to their deliveries at Overlook Medical Center.

BEST PLACE TO DELIVER – TWICE
On October 18, 2018, Latoya delivered 4 lb. 12 oz. Caiden and 5 lb. 10 oz. Charlstyn with a pregnant Jasmin right by her side. Five and a half months later – on March 21, 2019 – the roles were reversed, as Jasmin delivered 5 lb. 8 oz. Michael and 6 lb. 8 oz. Jean.

“The staff at Overlook was amazing – both times,” says Latoya. “The rooms were spacious, the food was good, and the candlelight welcome dinner was very special. The lactation nurse and nutritionist offered helpful advice on breastfeeding, coordinating feedings and overall diet.”

For Dr. Parchment, who has been welcoming babies into the world for 25 years, it was the first time she had delivered two sets of twins to the same family.

Kolawole Oyelese, MD, director, Maternal-Fetal Medicine, added, “Being pregnant with twins is considered a high-risk pregnancy. At

“The staff at Overlook was amazing – both times. The rooms were spacious, the food was good, and the candlelight welcome dinner was very special.”

– Latoya Jones
THE OVERLOOK MATERNITY EXPERIENCE

Whether you’re having one baby or multiples, Overlook’s maternity center has an extensive network of support to ensure that parents deliver their baby safely, and then feel competent and confident to go home and parent effectively.

“It provides a key resource while the mother’s own obstetrician is away from the hospital,” says Elynne Margulis, MD, chief of Overlook’s Obstetrics service. “Our maternity center fully integrates the latest technology and practices with parent education, specialist support like Maternal-Fetal Medicine, neonatology, lactation consultation and postpartum support to provide the top birth experience in the region.”

Additionally, every mom who delivers at Overlook enjoys a postpartum massage and a private celebration dinner with her partner before they go home.

To find out more information about Dr. Parchment and Atlantic Health System-affiliated providers, visit atlantichealth.org/doctors. To book a tour of the maternity center, please call 908-522-4838

AtlanticMedicalGroup.org
Overlook Medical Center recently became the first hospital in the Tri-State Area to implant a bioengineered blood vessel into a patient’s leg, giving a new, organic alternative for patients who need surgery to treat peripheral arterial disease (PAD). This was part of a Phase II clinical trial, announced in late 2016 by Humacyte. (Overlook previously took part in a randomized clinical trial placing the bioengineered blood vessel in the arm as an access for hemodialysis in patients with end-stage renal disease.)

**Overlook is one of only five sites in the United States to use the vessel in the leg. The HUMACYL® human acellular vessel (HAV) is produced by Humacyte, a pioneer in regenerative medicine with investigational products for vascular and nonvascular applications.**

**NEW TREATMENT FOR PAD**

Patients suffering from PAD are usually treated with minimally invasive methods such as angioplasty or stents – procedures for which Overlook’s vascular surgery team has been nationally recognized – to open the vessels.

However, when minimally invasive procedures are insufficient, traditional surgical techniques are required in which a person’s vein is utilized as an artery to bypass a blockage in the leg. If a person’s vein is not adequate – due to either small size or possibly having been previously removed – a synthetic plastic graft has traditionally been used. However, these grafts can become obstructed over time, or become infected, and may require multiple procedures or hospitalizations to keep them working.

**“This is a potential breakthrough in the management of PAD. HUMACYL offers the potential advantage of using a natural material with its improved results coupled with the availability of synthetic material to provide patients with a safer, effective method to treat PAD.”**

– Clifford Sales, MD, Principal Investigator; Chief, Division of Vascular Surgery, Overlook Medical Center

Humacyte’s investigational vessels are formed from banked human vascular smooth muscle cells. DNA is removed while retaining proteins, which are the same in all humans and preserve the mechanical properties of the vessel. No cells from the recipient patient are required for the production process, and the vessels can be stored under refrigerated conditions and are ready when needed in the operating room.

---

**WHAT IS PAD?**

Peripheral arterial disease occurs when the arteries in your body become clogged with plaque. This tends to occur over time – usually as you age. As the inside of the artery gets blocked, the amount of blood that flows through it diminishes. When the blood flow decreases, the areas supplied by those blood vessels receive less blood, causing them to suffer.

According to the American Heart Association, PAD affects about 8.5 million Americans over the age of 40, with smokers and those with diabetes at high risk. Genetics also plays an important role in predisposing people to developing PAD. Patients typically report this as a pain in their legs when they walk. It can also manifest – in more extreme forms – as a nonhealing wound on the legs or feet.
It’s a typical day in Overlook’s Cardiac Catheterization Laboratory. A patient suffering from a massive heart attack has just arrived at the Emergency Department. The team has been alerted, and they spring into action.

Technologists prepare one of two state-of-the-art interventional suites – outfitted with the latest imaging technology and treatment devices – for the patient’s arrival. One of eight interventional cardiologists is standing by, and the patient is wheeled through the doors.

Within minutes, pathways to the patient’s heart become lifesaving emergency routes. Cardiac catheterization imaging reveals blockages in major coronary arteries. A thin, flexible tube with a tiny balloon is threaded into the coronary artery to the site of the blockage. The balloon is inflated to move the plaque buildup in the artery up against the walls of the vessel and restore blood flow. A wire mesh coil, called a stent, is mounted onto the balloon, and – when fully expanded – acts as miniature scaffolding for the artery. The stent remains in the artery to keep it open. Every single step of the angioplasty procedure is time-stamped and documented into a detailed report.

“The most rewarding part of this job is seeing the immediate improvement in a patient’s condition,” says Rita Ampadu, an invasive radiologic technologist. “People arriving to the Cath Lab with a heart attack are very ill and very frightened. After treatment, they feel significantly better and they are tremendously thankful to be alive.”

Overlook Medical Center is among a select group of community hospitals licensed for primary angioplasty, an emergency cardiovascular intervention for patients suffering from heart attacks.

The minimally invasive procedure enables interventional cardiologists to open blocked arteries, improve blood flow to the heart, and minimize damage to heart muscle – all without general anesthesia.

“During a heart attack, time is muscle so treatment in the Cardiac Cath Lab is as acute as the diseases itself,” points out interventional cardiologist David N. Bartov, MD, FACC, medical director of Overlook’s Cardiac Catheterization Laboratory. “We perform nearly 100 emergency and more than 300 elective angioplasties each year.” At Overlook, a team of highly experienced nurses and cardiovascular technologists assist interventional cardiologists with both elective and emergency angioplasty procedures 24 hours a day, seven days a week.

THE RADIAL APPROACH

According to Dr. Bartov, many cardiac catheterizations – the “gold standard” for diagnosing damaged or blocked blood vessels, arteries, valves and chambers in the heart – are now performed via a radial artery approach (in the wrist) rather than through the femoral artery in the groin.

“The radial artery is the one you feel when you are taking your pulse at your wrist,” explains Dr. Bartov. “Since the radial artery is much smaller than the femoral artery, it requires less time to heal after the procedure, presents less risk of bleeding...
Performs approximately 100 emergency and more than 300 elective angioplasties each year

LEADING-EDGE TREATMENT WHEN MINUTES MATTER
Being at the right place at the right time is especially important when a cardiac emergency suddenly becomes even more critical... as in the case of cardiogenic shock.

Heart attack patients who go into cardiogenic shock – a rare, often-fatal condition in which the weakened heart cannot pump enough blood and oxygen to the body’s organs – have about a 50% chance of survival. Fortunately, patients treated at Overlook’s Cardiac Catheterization Laboratory have access to lifesaving support from Impella®, the world’s smallest mechanical heart pump.

The device is so small that it fits on the tip of a catheter, which is threaded to the heart through an artery in the leg. Once in place, it helps restore normal blood flow to the heart and organs while the cardiologist opens blockages through angioplasty.

In other critical cases, such as when too much time has elapsed following cardiac arrest, the Cardiac Cath Lab team acts quickly to induce hypothermia. Research shows that reducing the body temperature to 91.7 F as soon as possible for a 24-hour period can protect precious brain tissue and heart muscle. For more than a decade, Atlantic Health System heart specialists have been leaders in using induced hypothermia to treat post-cardiac arrest patients.

"It is rare for a community hospital to have the technology, tools and team we have assembled here," observes Dr. Bartov. “It all adds up to high-caliber cardiac care right in our backyard.”

Overlook’s full-service Cardiac Cath Lab also offers pacemaker and defibrillator implantation, interventional procedures for lower-extremity peripheral vascular disease, minimally invasive interventional radiology procedures, and transesophageal echocardiogram.

ATLANTIC MEDICAL GROUP
Dr. Bartov is part of Atlantic Medical Group, a multispecialty network of health care providers. For more information, visit atlanticmedicalgroup.org. He can be reached at 908-464-4200.

OVERLOOK MEDICAL CENTER EXPANDS IN UNION

All new offices and offerings, fully renovated facilities usher in new era at Five Points

Overlook Medical Center first began seeing patients in Union in 2007 in the Emergency Department at 1000 Galloping Hill Road, and quickly expanded its presence at the location to offer imaging, lab services, wound care and a developmental disabilities center.

Today, we are cutting ribbons on our biggest expansion in Union yet – more than doubling the services provided and fully updating existing offices and practices – bringing Overlook to your neighborhood.

And we are not done yet. By year’s end, we will double the size of the Atlantic Rehabilitation Center, add more subspecialized physicians to our specialist suite and renovate the Emergency Department.

We invite you to visit and get acquainted with the healthy – and convenient – changes at our Union Campus.

For more information about Overlook Medical Center’s Union Campus services, call 908-522-3770, or visit atlantichealth.org/unioncampus. You can find us at 1000 Galloping Hill Road, Union, NJ 07083.
Atlantic Nephrology & Diabetes is located on the first floor, just inside the green awning entrance.

Stay well with one of our seven Atlantic Medical Group physicians in our Primary Care practice. Appointments can now be made online at atlanticmedicalgroup.org/primary-care-union. Extended hours offered.

When Memory Loss Is More Than Normal Aging

Diagnosis and treatment may effectively manage symptoms and offer hope

Any person of a certain age who forgets words or loses his or her car keys may think they are in the beginning stages of dementia – but it could be normal aging.

Many people experience mild cognitive impairment (MCI), changes in memory and thinking that have not made a huge impact on their daily life and function. Dr. Anjali Patel, a cognitive neurologist, says, “About 12 to 15% of people with MCI will develop Alzheimer’s disease (AD) or another form of dementia; some people stay the same, and others get better.”

The most common form of dementia is Alzheimer’s disease (AD), but more exist: Lewy body, vascular, frontotemporal, Parkinson’s disease, Huntington’s disease, chronic traumatic encephalopathy (CTE), and some secondary dementias that occur because of disorders that damage the brain. Some conditions that look like dementia develop from nutritional deficiencies, hormone dysfunction, side effects of medications or chronic infections, and can be reversed.

A DIAGNOSIS IS THE FIRST STEP

According to Dr. Patel, most memory problems can be diagnosed by obtaining a thorough history, completing a physical with blood work, and cognitive tests in the office. Generally, an imaging study such as an MRI or CT scan of the brain is obtained. If necessary, additional tests such as neuropsychological memory testing, lumbar puncture or PET scans can be obtained. With an accurate diagnosis, the disease can be better managed with proper treatment.

While researchers are working for a cure, there are interventions that will help manage the disease and possibly prevent secondary dementias. These include keeping blood pressure within normal ranges, controlling cholesterol, treating sleep apnea, following the MIND diet, being physically and socially active, and limiting alcohol intake.

MANAGING THE SYMPTOMS OF ALZHEIMER’S DISEASE

There are two types of medications that can slow down cognitive decline – cholinesterase inhibitors (i.e., donepezil, rivastigmine and galantamine) and memantine, an NMDA receptor antagonist (i.e., Namenda). They are not a cure and do not prevent the progression of the underlying disease.

“Of those taking cholinesterase inhibitors, about one-third of people improve, one-third stabilize, and one-third have no response. Memantine blocks excessive glutamate release, allowing better function of the impaired brain, and is usually indicated for people with moderate to severe symptoms of dementia,” says Saurabh Sharma, MD.

Cognitive decline often leads to or can be associated with secondary symptoms such as depression and feeling loss of control. “Giving the patient more freedom to make his or her own choices, to participate in once-favorite activities, or even music therapy might alleviate several symptoms of Alzheimer’s disease,” Dr. Sharma notes.

TIPS TO STAY HEALTHY

Insomnia has many causes, ranging from anxiety to drinking liquids too close to bedtime. Dr. Sharma recommends trying natural remedies such as melatonin and sound machines or eye shades before relying on medication. He also recommends avoiding drugs such as Benadryl or sedatives.

Drug therapies are available if these do not work. For other behavioral symptoms, mood stabilizers, anticonvulsants and neuroleptics can all help. Dr. Sharma says patients should discuss with their doctor about using FDA-approved drugs, and avoid supplements for which “reliable research on the efficacy and safety” is not available.

“Giving the patient more freedom to make his or her own choices, to participate in once-favorite activities, or even music therapy might alleviate several symptoms of Alzheimer’s disease.”

— Saurabh Sharma, MD
Neurosurgeons at Overlook are not only following best practices in neurological care, they are pioneering them right here in our community.

Thanks to Overlook’s participation in a groundbreaking national clinical trial and its early adoption of next-generation, state-of-the-art technology, patients with intracerebral hemorrhage (ICH) have access to two new lifesaving options.

ICH – commonly caused by high blood pressure – occurs when a weakened or diseased blood vessel within the brain bursts, allowing blood to leak inside the brain. The sudden increase in pressure within the brain can cause damage to brain cells, unconsciousness or death.

“Traditional surgery is often not an option when removing clots from intracerebral hemorrhage because they tend to be located in deep-seated areas of the brain,” says Ronald P. Benitez, MD, director of endovascular neurosurgery for Overlook Medical Center, who specializes in both the surgical and endovascular management of cerebrovascular disease. “During surgery, there is a significant risk of disrupting normal brain tissue.”

That’s where the potential benefits of minimally invasive surgical techniques for blood clot removal come into play.

THE MIND TRIAL

Overlook is the only hospital in New Jersey and one of only 50 sites internationally participating in the MIND study, comparing the safety and efficacy of minimally invasive blood clot removal with the Artemis™ Neuro Evacuation Device to best medical management for the treatment of ICH. The device is inserted through a catheterlike sheath via a one-inch incision in the scalp and a tiny burr hole through the skull to the affected area of the brain, where it removes the blood clot through suction.

Up to 500 patients between 18 and 80 years old with ICH may be eligible to participate in the trial. Participants are randomized to either receive minimally invasive hematoma evacuation with the Artemis Neuro Evacuation Device or best medical management of their condition within the region’s leading Neurocritical Care Unit at Atlantic Neuroscience Institute at Overlook.

“Overlook is the highest enrolling site in the study, accounting for approximately half of the patients participating, and we are very encouraged by the outcomes to date,” comments neurosurgeon Paul S. Saphier, MD, Overlook’s principal investigator and lead enroller in the study, who specializes in cranial, spinal and endovascular neurosurgery.

“This is an exciting breakthrough in the treatment of a life-threatening cerebral condition,” adds Dr. Saphier, who travels around the globe to teach other neurosurgeons how to use the Artemis Neuro Evacuation Device. “We’re proud to be on the forefront of this and so many other developments in neurological care.”

FIRST CLINICAL USE OF AURORA® SURGISCOPE SYSTEM IN U.S.

Ronald P. Benitez, MD, recently earned the distinction of being the first physician in the U.S. to utilize the new FDA-approved AURORA Surgiscope System to remove a blood clot in a patient with an intracerebral hemorrhage.

The advanced system, manufactured by Rebound Therapeutics®, incorporates a single-use, disposable, minimally invasive access port with built-in, state-of-the-art imaging and illumination technology, compatible with current operating room high-definition, flat-panel displays. The AURORA system also includes a nonsterile, reusable Image Control Box, which allows the surgeon to digitally manipulate imaging and illumination features. The AURORA Evacuator device was placed through the Surgiscope for the successful evacuation of the blood clot in this case.

“This revolutionary system represents the integration of state-of-the-art technology specifically designed for minimally invasive neurosurgical procedures,” observes Dr. Benitez.

See other clinical trials at our newly redesigned atlantichealth.org/research site for clinical trials across Atlantic Health System that focus on various medical conditions.
It’s the hottest trend in fitness … the most ubiquitous accessory to adorn wrists since the invention of the watch. But do wearable fitness trackers really work? Do they motivate you to exercise more?

That was the question researchers at Atlantic Sports Health sought to answer in a study examining the effectiveness of wearable activity devices. The researchers recruited 60 relatively healthy male and female Atlantic Health System employees who held office or “desk” jobs to participate in the 14-week study.

They randomly placed participants in one of three groups. For the first 30 days, Group A participants wore a device with knowledge of its function, and with access to the data measured by the device (such as steps taken). Group B had knowledge of the device’s function, but without access to the data through the corresponding digital app. From days 31 to 60, Groups A and B crossed over to either gain access to the device’s data (Group B) or lose it (Group A). The third group, Group C, had knowledge of the device’s function but had no access to the data for the duration of the study. All groups were told to maintain their current diet and did not receive specific guidance on exercise.

The results showed that those who had access to information about their progress remained more active than those who only wore the device. This was most evident with Group A, which averaged the most active hours per day throughout the study but saw a decrease in active hours and steps taken when they lost access to that information.

“This study, along with others, shows that while wearable fitness trackers can be instrumental in achieving fitness goals, it’s the information they convey – not the device alone – that keeps people motivated and on track,” says Damion A. Martins, MD.

HOW MUCH EXERCISE DO YOU NEED?

Adults should engage in at least 150-300 minutes of moderate-intensity (brisk walk) physical activity or 75-150 minutes of vigorous-intensity (fast jog or run) aerobic physical activity (or an equivalent combination of the two) per week and perform muscle-strengthening activities of moderate or greater intensity that involve their major muscle groups two or more times a week.

– Physical Activity Guidelines for Americans, U.S. Department of Health & Human Services
Editor: As someone who has worked with thousands of college and elite professional athletes, what advice would you give to those who want to start or maintain a successful fitness program?

Dr. Martins: Begin by understanding your individual road map for success. What motivates you to exercise? What type of exercise do you enjoy? Are your goals specific and trackable? Would information from a fitness tracker help motivate you?

Monitoring your pre- and post-workout behavior could significantly help you target weight loss. For example, you may be working out at the wrong intensity level. I’ve seen people who go through an hour-long spin class, grab a Frappuccino on their way home, and then wonder why they haven’t lost any weight. During high-intensity cardio, you burn primarily carbohydrates, which can cause a drop in blood sugar and create sharp hunger spikes that often lead to poor diet choices. That same person might be better served performing longer, lower-intensity workouts (below their anaerobic threshold) so they burn primarily fat. If you are struggling to determine your optimal fat-burning zone, we offer exercise testing and specific exercise prescriptions to help you train smarter, not harder.

Atlantic Sports Health offers a variety of resources for patients who want to know more about injury prevention, training, nutrition and living an active life. Medical professionals can work with you to increase your strength, speed, agility, flexibility, coordination, cardiovascular endurance and overall conditioning. We offer sports performance physicals, including electrocardiograph (EKG) testing, lab work, body composition analysis, flexibility analysis, functional movement screening, biomechanical evaluation and more to help reach your athletic goals at any level.

For more information, visit atlantichealth.org/sportshealth or call 973-971-6898.

Damion A. Martins, MD, MS, is medical director of sports medicine and sports physical therapy for Atlantic Health System, who led the study. While research is still needed to determine how long the motivational effects of fitness tracking devices last, Dr. Martins is encouraged to see that they can play a role in helping people start or maintain an exercise program.

“If you’re intrinsically motivated to exercise on a regular basis, a wearable device may not be necessary,” says Dr. Martins. “However, if you’re someone who needs a bit more motivation to keep moving, a fitness tracker might literally be steps in the right direction.”

PROFESSIONAL ADVICE FROM THE PROFESSIONALS’ DOC

“IT’S THE INFORMATION THEY CONVEY – NOT THE DEVICE ALONE – THAT KEEPS PEOPLE MOTIVATED AND ON TRACK.”

– Damiion A. Martins, MD, MS

MS, medical director of sports medicine and sports physical therapy for Atlantic Health System, who led the study.

While research is still needed to determine how long the motivational effects of fitness tracking devices last, Dr. Martins is encouraged to see that they can play a role in helping people start or maintain an exercise program.

“If you’re intrinsically motivated to exercise on a regular basis, a wearable device may not be necessary,” says Dr. Martins. “However, if you’re someone who needs a bit more motivation to keep moving, a fitness tracker might literally be steps in the right direction.”

ATLANTIC MEDICAL GROUP

Dr. Martins is part of Atlantic Medical Group, a multispecialty network of health care providers. For more information, visit atlanticmedicalgroup.org. He can be reached at 973-971-6898.

Damion A. Martins, MD, MS, is medical director of sports medicine, director of the Executive Health Program, and director of the Sports Medicine Fellowship for Atlantic Health System. Dr. Martins is the director of internal medicine and team physician for the National Football League’s (NFL) New York Jets, where he has served as a medical consultant since 2002 and member of the NFL Team Physician Society. His extensive experience on both the professional and collegiate levels also includes National Hockey League (NHL) team physician; administrative medical director for Major League Soccer (MLS); and medical coverage for the U.S. Open Golf Championship, U.S. Open Tennis Championships, New York Islanders, New York Dragons, Hofstra University and the College of St. Elizabeth. He is currently a medical advisor for the New Jersey Interscholastic Athletic Association and Parisi Speed School.
A new mother with postpartum depression; a middle-age executive with suicidal thoughts; an adolescent feeling isolated from his peers; a college student struggling with anxiety; a 92-year-old suffering from dementia; a construction worker addicted to alcohol and opioids – these are just some of the friends, family members or neighbors in our community who could benefit from behavioral health services.

“There is growing acceptance for the role of mental and behavioral health services in our communities – and that’s refreshing,” says Peter Bolo, MD, chair, Psychiatry and Behavioral Health Services at Overlook Medical Center.

“There is much less stigma associated with mental health issues today, and so we’re seeing increasing numbers of people – particularly millennials – accessing mental health treatment for a range of issues. We know much more about the brain and the biological basis of behavioral health problems than ever before,” comments Dr. Bolo, who recently celebrated his 20th anniversary at Overlook. “People today realize that seeking help for a mental health issue doesn’t mean they are a weak or bad person. It means they are being open and honest with themselves and others.”

“Greater media attention surrounding mental illness has also helped debunk stereotypes,” Dr. Bolo adds. “When people see athletes and celebrities talk about their treatment for depression, anxiety, or post-traumatic stress, for example, it helps break down barriers.”

Insurance coverage is another factor, points out Dr. Bolo. Payers today provide benefits for a broad array of mental health and substance abuse treatment programs.

NEW LOCATION DOUBLES ACCESS

To expand access to its comprehensive range of behavioral health services, Atlantic Behavioral Health Access Center at Overlook Medical Center has relocated its outpatient offices to a new, 5,000-square-foot space at 2 Walnut Street in Summit. The Walnut Street location nearly doubles the size of the previous outpatient behavioral health services space, which was housed in a modified residential building owned by Overlook on Beauvoir Avenue.

“Since the majority of behavioral health services are provided on an outpatient basis, moving to a larger, more modern and adaptable space will allow us to serve more than the 900 patients we welcomed last year,” explains Dr. Bolo.

Call Overlook’s Access Center for Outpatient Care at 1-888-247-1400 if you or someone you know wants information about behavioral health services. The center can schedule appointments for various behavioral health services, check insurance eligibility and provide referrals. In all cases, patient confidentiality is strictly maintained.

For more information about inpatient and outpatient behavioral health services at Overlook Medical Center, visit atlantichealth.org.

43.8 million adults (1 in 5) in America experience a mental illness. (National Alliance on Mental Illness and the Substance Abuse and Mental Health Services Administration)

ATLANTIC BEHAVIORAL HEALTH OVERLOOK MEDICAL CENTER

The Walnut Street location offers traditional outpatient therapy, mental health and substance misuse intensive outpatient programs, and medication management. There are three group therapy rooms, a conference room, a kitchen with eating space, and plenty of parking. On-site psychiatrists, psychologists, clinicians, and an advance practice nurse provide coordinated care for patients of all ages with depression, anxiety, bipolar disorder, peri- and postpartum depression, addiction, mood disorders, and more. Both inpatient and outpatient electroconvulsive therapy and inpatient stabilization of complications of dementia are available in the main hospital building.
At Atlantic Health System, we’re always looking for ways to give back to the community. One of the ways we do this is through our community gardens. Below, you’ll find out a little more about this initiative at Overlook Medical Center.

**ABOVE** Overlook supported the creation of a community garden in the Vauxhall section of Union, working with the township and the Golden Rule Lodge No. 24 and Golden Rule Chapter No. 50; and distributed food to the community at the Golden Kitchen Food Pantry.

**LEFT** We’ve continued our hosting of a community garden in Summit, which is used by residents and local community groups to grow local, sustainable foods; community food pantries use some plots.
Did you know that you wage a war every day inside your stomach? It’s a battle between bad bacteria – which cause inflammation and gastrointestinal (GI) distress – and good bacteria, which improve the GI flora in your gut and offer such benefits as a calmer stomach, a healthier immune system, and even a clearer mind. Tip the balance of good bacteria in your favor with these tips from Gale Reed, RDN, outpatient dietitian for Overlook Medical Center.

**PRE AND PRO ARE THE WAY TO GO**
For maximum benefit, our bodies need both prebiotics and probiotics. Prebiotics are high-fiber foods that make it easier for probiotics to flourish. Probiotics are the aforementioned “good bacteria” that promote healthy digestion. “Think of prebiotics like fertilizer for the probiotics,” says Reed. “They get the gut ready. Just like in a garden, the more you fertilize, the better the yield. When you consume high-fiber prebiotic foods, it makes it easier for your body to absorb the probiotic foods that improve your body’s own microbiome.”

**FOOD VS. SUPPLEMENTS**
Reed cites a review of indexed articles in PubMed and ScienceDirect, which concluded that although both foods and supplements are efficient carriers of beneficial bacteria, probiotic foods are preferred over probiotic supplements to promote health. “Probiotic and prebiotic properties are naturally occurring in food,” says Reed, “with the added benefit of health-promoting fiber, antioxidants and phytonutrients.” In other words, you get more bang for the buck.

---

**POWER PLAYERS**
To help optimize your overall well-being, choose foods from each list daily.

**PROBIOTIC FOODS**
- Active-culture yogurt
- Kefir
- Kombucha tea
- Tempeh (fermented soybeans)
- Kimchi
- Sauerkraut
- Pickles
- Pickled fruits and vegetables

**PREBIOTIC FOODS**
- Acacia gum
- Raw chicory root
- Raw Jerusalem artichoke
- Raw dandelion greens
- Raw garlic
- Raw or cooked onion
- Raw leek
- Raw asparagus

---

**THE ‘GUT-BRAIN AXIS’**
Prebiotics and probiotics can do more than bolster your immune system or soothe your stomach. There is evidence that your brain influences weight gain, bowel habits, nutrient delivery and microbial balance. Similarly, the gut has influence on neurotransmitters that play a role in regulating mood, behavior, and stress and anxiety. “Your brain informs your gut, and vice versa,” says Reed. “You can influence both with the foods you eat, and these prebiotic- and probiotic-rich foods can really make a difference.”

*Outpatient counseling with a registered dietitian is the more effective way to address your nutritional needs. Call 908-522-6114 to schedule an appointment.*
SUMMER SIZZLE

Make your grill the envy of the neighborhood by firing up this duo for dinner and dessert

Grilled Orange Tarragon Chicken
(yields 4 to 6 portions)

Ingredients
2 pounds boneless, skinless chicken breasts or thighs
¼ cup orange juice
½ cup honey
2 tablespoons soy sauce
1 tablespoon olive oil
2 garlic cloves, minced
½ cup parsley (flat leaf), finely chopped
½ teaspoon salt
¼ teaspoon pepper
6 orange wedges and tarragon sprigs for garnish (optional)

Ingredients for Dressing
1 teaspoon Dijon mustard
1 tablespoon orange juice
¼ teaspoon orange zest
3 tablespoons olive oil
1 tablespoon minced fresh tarragon
¼ teaspoon sugar
¼ teaspoon salt
¼ teaspoon pepper

Directions
1. Put chicken in a zip-top bag. In a small bowl, combine orange juice, honey, soy sauce, olive oil, garlic, parsley, salt and pepper. Pour the sauce over the chicken, seal the bag, and let it marinate for 6 to 8 hours, or overnight in the refrigerator.
2. Make dressing. Whisk together mustard, orange juice, orange zest, olive oil, tarragon, sugar, salt and pepper in a small bowl. Set aside.
3. Preheat grill to medium-high heat. Grill each side of the chicken for 6 to 8 minutes or until cooked through and no longer pink. (Use thermometer to check chicken; internal temperature should be a minimum of 175 degrees.)
4. Remove chicken from grill and let rest 8 to 10 minutes for internal juice to settle before slicing or serving. Serve chicken with a drizzle of dressing on top.

Grilled Melba Pound Cake
(yields 4 portions)

Ingredients
2 large ripe peaches, pitted and cut in half
1 loaf of angel food cake or pound cake (cut into four ½-inch slices)
1 pint raspberries (reserve half berries for garnish)
1 tablespoon sugar
4 tablespoons honey
1½ cups vanilla ice cream
4 mint sprigs (for garnish)

Directions
1. Place peach halves on hot grill grate at medium heat and cook 5 to 6 minutes or until lightly charred and tender, turning over once. Set aside and keep warm.
2. Grill angel food or pound cake slices. While those are grilling, prepare sauce: In bowl, with fork, mash half the raspberries with sugar. Stir in remaining raspberries.
3. To serve, cut grilled peaches into quarters, place on each slice of grilled cake on 4 dessert plates. Drizzle with honey, and top with ice cream and raspberry sauce. Garnish with raspberries and mint leaf.

CULINARY CORNER
With Chef Todd

Chef Todd H. Daigneault, ASCS, CEC, is executive chef for Overlook Medical Center. He is devoted to helping people incorporate healthy eating into their daily lifestyle. He has worked for prominent restaurants and resorts across the country, and has won numerous chef challenges. For more recipes, check out cookingwithcheftodd.com or follow him on Twitter @ChefDaigneault.
A Better Patient Experience

New technology reduces stress before breast surgery

With about one in eight women receiving a breast cancer diagnosis in her lifetime, thousands are worried about impending surgery in any given week.

For Overlook Medical Center patients, breast surgery used to mean two separate procedures in a single day. Typically, a lumpectomy first involved a visit to The Breast Center for wire localization. A long wire, or hookwire, was inserted into the breast to tag the tumor. Then, with the protruding wire and some bandaging, the patient would travel to the hospital for surgery, sometimes hours later.

“There were a number of patient satisfaction issues related to this process,” says Rebecca Yang, MD, director of breast surgical oncology. “In addition to the stressful wait time between wire placement and surgery, patients experienced discomfort and an increased risk of fainting due to the required presurgical fasting. We also faced a risk of dislodgement of the wire, with such migration leading to difficulty in finding the lesion in the operating room.”

Now, thanks to the wire-free radar localization system Savi Scout®, these women can have a small reflector the size of a grain of rice implanted in the breast prior to the day of surgery. Surgeons then use a handheld wand, which provides both audio and visual feedback, to locate the marker, generally within 1 millimeter of the cancer.

“With patients able to have the reflector placed days or even weeks in advance, there is less preparation time needed on the day of surgery,” explains Benjamin Schneider, MD, medical director of The Breast Center at Overlook. “And since the localization is performed on a day separate from surgery, the patient does not have to fast for this procedure. Clearly, this makes for a superior patient experience with no radiation and no wire involved.”

Funded by the Overlook Foundation, this technology also offers improved cosmetic results, as surgeons can approach the lesion from virtually any angle for optimum placement of the incision.

“We are so grateful for the support we received from the Overlook Foundation to launch this wireless localization program,” adds Dr. Yang. “The Savi Scout allows us to individualize a patient’s treatment plan before surgery and reduces the level of anxiety for everyone involved.”

“The Savi Scout allows us to individualize a patient’s treatment plan before surgery and reduces the level of anxiety for everyone involved.”

– Rebecca Yang, MD

## Community Calendar

Welcome to your new Overlook Medical Center Community Calendar. We’ve reformatted the calendar to make it easier to find events near you. This refreshed design gives you all the information you need at a glance.

Below, you’ll find wellness events for the rest of the year, including bone density and BMI/glucose screenings. Pages 29-31 contain the usual programming you’ve come to expect.

**For more information about any of the events listed, call 1-800-247-9580 unless otherwise noted.**

# Community Calendar

**Summer 2019**

Registration is required for all programs through Overlook Medical Center’s Health Information Services at 1-800-247-9580 (unless otherwise noted).

## New Vitality

### Date

Various dates and times

### Event Details and Location

**New Vitality Program**
If you’re over the age of 65 and are looking for new ways to enhance your health and social life, join New Vitality, an award-winning health and wellness program tailored to meet the needs of today’s adults, 65 and older. Membership is free and offers access to classes, selected health screenings, a quarterly magazine, and special events. New Vitality programs are held at various locations throughout Atlantic Health System. Most programs are free; others may require a small fee.

### Contact and Fees

For complete listing of classes, activities and to join the New Vitality Program, call 1-844-472-8499 or visit atlantichealth.org/newvitality.

**FEE: Membership is FREE**
